gautam-jha

Summary

Dedicated and skilled frontend developer with over 5 years of experience. Proficient in JavaScript, React.js, Vue.js, and adept at implementing micro frontends and web components. Proven track record of delivering high-quality and scalable solutions, combining technical expertise with a commitment to user-centric design.

Experience

Siemens — Jul 2022 to Present
Sr. Software Engineer   Hybrid / Delhi NCR
https://brightlysoftware.com/

Workinh collaboratively with cross-functional teams to create and manage micro frontends using Vue, Typescript, JavaScript, and Stenciljs, delivering top-notch web applications. Utilized expertise in Lit, Stencil.js, and Vue to establish a reusable design system and maintain code consistency. Took the lead in developing a scalable architecture for micro frontends, facilitating integration with third-party applications and streamlining development. Actively engaged in code reviews, mentoring, and upskilling team members in best practices, design patterns, and emerging technologies.

SHL — Aug 2021 to Jun 2022
Sr. Frontend Developer   Remote
https://9yardstechnology.com/

As a Senior Frontend Engineer & Architect at client SHL, I contributed to various products, focusing on optimizing microservices through Terraform for efficient cost and resource usage. I meticulously translated FIGMA designs into scalable React components, ensuring pixel-perfect precision. Additionally, I enhanced user experience by implementing client-side downloadable reports, providing easier data access. Furthermore, I played a key role in migrating legacy system dependencies to microservices, leading to enhanced system performance and scalability.

Amdocs — Apr 2020 to Aug 2021
Frontend Developer | System Analyst   Remote
https://amdocs.com/

Developed an advanced dashboard and migration tools using React with PHP/Python APIs, including a UI redesign for increased internal team productivity. Mentored developers in software architecture and performance optimization, while restructuring backend logic for improved performance and scalability. Created Python and PHP-based APIs for large databases, implemented secure access through LDAP and AD groups, and developed testing tools using Selenium. Established CI/CD pipelines for successful software deployment to the client site.

ExperienceSaga — Aug 2018 to Mar 2020
Web Developer | WP | LEMP   New Delhi, IN
https://experiencesaga.com/

Managed technical needs in a startup setting, overseeing diverse tasks. Redesigned a WordPress theme to align with new specifications and crafted plugins for location-based listings in WooCommerce. Engineered a custom lead capturing system that substantially elevated customer inquiries. Designed a CMS for invoicing and billing, optimizing operational and accounting processes. Contributed to a venue management portal using React and Laravel. This multifaceted role involved adapting to various challenges and implementing solutions for WordPress development.
